ADHD Management Guide

1. Conduct a thorough diagnostic evaluation

   a. The clinical diagnosis of ADHD should be based on DSM-IV criteria which requires the presence of core symptoms that are associated with functional impairment in greater than one setting (See Appendix A).

   b. Assessment of ADHD requires evidence directly obtained from at least two sources: parents or caregivers and teachers or other school personnel. The focus should be on core symptoms, the age of onset, duration of symptoms and degree of functional impairment.

   c. A complete medical history and physical exam is essential.

   d. The differential diagnosis should include exclusion of other conditions that may present with ADHD-like symptoms, including learning disorders and sleep disorders such as obstructive sleep apnea.

   e. Evaluation should include assessment for comorbid conditions that often coexist with ADHD: ODD 35%, conduct disorder 26%, anxiety disorder 26% and depressive disorder 18%.

   f. Medical record documentation should include a summary of all assessments.

   Behavior rating scales can help identify patterns that may suggest the presence of comorbid disorders and identify specific treatment targets. Refer to Appendix B.

2. Begin parent and patient education immediately upon diagnosis

   a. Provide culturally-appropriate explanations and educational and community resources.

   b. Evaluate parent and family tolerance and expectations and the degree of stress on the family caused by the patient’s symptoms. When expectations and stress levels are high, parent and sibling reactions may exacerbate the patient’s symptoms.

   c. Discuss the importance of minimizing additional triggers such as hunger, fatigue and new situations that can exacerbate overactivity and impulsivity.

   d. Discuss the availability and use of home-based and school-based interventions.
3. Define 3-6 individual patient treatment goals

   a. Goals should be realistic, attainable and measurable, and should focus on improved functioning in the home, school and social settings.

   b. Core ADHD symptoms—inattention, impulsivity, and hyperactivity—should be specifically addressed since they are most likely to respond directly to medications.

   c. Patients, parents and teachers should be included in goal-setting.

   d. Use of ADHD rating scales is strongly recommended. A baseline assessment of parent and teacher rating scales (as well as reports of attendance and grades) is strongly recommended prior to initiation or modification of treatment.

4. Choose an initial treatment strategy

   a. Consider the use of a multimodal strategy, including drug therapy, behavioral therapy, family/parent training. As a separate modality or in combination with drug therapy, behavior therapy has proven effective when maintained.

   b. If stimulant therapy is chosen, conduct a thorough baseline evaluation for the presence of any underlying cardiac disease or abnormality that may place the patient at increased risk to the sympathomimetic effects of stimulants.

   c. Develop a systematic plan for follow-up within 2 to 4 weeks, detailing communications between patient, parent(s), school and clinician.
Considerations When Prescribing Stimulants

- Efficacy ranges from 68-80%.
- Many who fail to respond to one may respond to another.
- Duration of effect ranges from 2-12 hours and varies among individuals.
- Dosing may correlate with weight.
- Dosing schedules should be individualized to the patient and treatment goals (e.g., is there a need for improved functioning only at school or at school and after-school) and also treatment-emergent adverse effects.
- Use caution when prescribing stimulants for adolescents with a history of alcohol or drug dependence.
- The FDA recently issued warnings about the risk for sudden cardiac death (SCD) and adverse psychiatric symptoms associated with stimulants. For full text of the warnings and medication guides, go to http://www.fda.gov/cder/drug/infopage/ADHD/default.htm.
- In response, the American Heart Association issued the following recommendations for cardiovascular risk-assessment:
  - Conduct a thorough baseline evaluation and physical exam for the presence of symptoms which can suggest a cardiac condition, such as near syncope and syncope, heart murmur, hypertension, and arrhythmia.
  - Conduct a family history, especially for conditions known to be associated with SCD, such as hypertrophic cardiomyopathy, long QT syndrome, Wolff-Parkinson-White syndrome and Marfan syndrome.
  - Consider obtaining a baseline ECG, especially if the exam and family history suggest high-risk conditions.
- Common stimulant side effects, such as appetite suppression, insomnia, behavioral rebound, headache and stomachache, often can be addressed through patient and parent reassurance and dosage adjustments before switching to another agent or adding additional agents.
- Symptoms such as appearing overfocused or a dull affect may suggest that the stimulant dose is too high.
- Serious adverse effects (e.g. tics, psychosis) are rare. However, if a patient has serious side effects with one stimulant, the chance of having similar side effects with other stimulants is high. Consider reevaluating the possible presence of comorbidities.
- Cost can vary significantly among regimens.
- See Appendix C for specific drug information.
5. Evaluate and revise the treatment strategy as needed

a. The frequency of monitoring depends on the degree of dysfunction, complications and adherence. No controlled trials clearly document the appropriate frequency of follow-up visits.
   1. When initiating or altering drug therapy, assessment should occur within 2 to 4 weeks.
   2. Once stable, assessment should occur at a minimum every 3 to 6 months.

b. Perform a physical exam to identify potential adverse effects, including but not limited to: insomnia, appetite suppression and weight loss, and adverse cardiovascular and psychiatric effects.

c. Assess adherence to medications and other therapies.

d. Assess response to treatment based on target outcomes.
   1. Include data from both parent and teacher rating scales.
   2. Record results in the progress note. Incomplete documentation complicates further assessment and treatment.

e. Adjust medication dose as required.

   A legitimate trial of a stimulant is 3 to 4 weeks long. If a drug is ineffective at its highest tolerated dose after 3 to 4 weeks and treatment adherence has been verified, consider changing to a different drug.

6. Consider the following, if target outcomes aren’t reached after two or more stimulant trials:

a. Reevaluating the diagnosis and comorbid conditions.

b. Assessing the adequacy of dosing and medication adherence.

c. Reevaluating treatment expectations, normal developmental changes in behavior over time, educational expectations that increase with each grade, and the dynamic nature of a child’s home and school environment. Changes in any of these factors may alter core symptoms and impact treatment goals.

d. Initiating a trial of a non-stimulant.

e. Initiating a psychiatric referral.

APPENDIX A:

DSM-IV-TR Diagnostic Criteria for Attention-Deficit/Hyperactivity Disorder

A. Must have either (1) or (2); and B, C, D, & E:

(1) Six (or more) of the following symptoms of inattention have persisted for at least 6 months to a degree that is maladaptive and inconsistent with development level:

**Inattention**

(a) Often fails to give close attention to details or makes careless mistakes in schoolwork, work or other activities.
(b) Often has difficulty sustaining attention in tasks or play activities.
(c) Often does not seem to listen when spoken to directly.
(d) Often does not follow through on instructions and fails to finish schoolwork, chores or duties in the workplace (not due to oppositional behavior or failure to understand instructions).
(e) Often has difficulty organizing tasks and activities.
(f) Often avoids, dislikes or is reluctant to engage in tasks that require sustained mental effort (such as schoolwork or homework).
(g) Often loses things necessary for tasks or activities (e.g. toys, school assignments, pencils, books or tools).
(h) Often easily distracted by extraneous stimuli.
(i) Often forgetful in daily activities.

(2) Six (or more) of the following symptoms of hyperactivity-impulsivity have persisted for at least 6 months to a degree that is maladaptive and inconsistent with development level:

**Hyperactivity**

(a) Often fidgets with hands or feet or squirms in seat.
(b) Often leaves seat in classroom or in other situations in which remaining seated is expected.
(c) Often runs about or climbs excessively in situations in which it is inappropriate (in adolescents or adults, may be limited to subjective feelings of restlessness).
(d) Often has difficulty playing or engaging in leisure activities quietly.
(e) Often “on the go” or often acts as if “driven by a motor.”
(f) Often talks excessively.

**Impulsivity**

(a) Often blurts out answers before questions have been completed.
(b) Often has difficulty awaiting turn.
(c) Often interrupts or intrudes on others (e.g. butts into conversations or games).
B. Some hyperactive-impulsive or inattentive symptoms that caused impairment were present before age 7 years.

C. Some impairment from the symptoms is present in two or more settings (e.g. at school [or work] and at home).

D. There must be clear evidence of clinically significant impairment in social, academic or occupational functioning.

E. The symptoms do not occur exclusively during the course of a Pervasive Developmental Disorder Schizophrenia or other Psychotic Disorder and are not better accounted for by another mental disorder (e.g., Mood Disorder, Anxiety Disorder, Dissociative Disorder or a Personality Disorder).

If both Criteria A1 and A2 are met for the past 6 months:
_____ 314.01 Attention-Deficit/Hyperactivity Disorder, Combined Type.

If Criterion A1 is met but not Criterion A2 for the past 6 months:
_____ 314.00 Attention-Deficit/Hyperactivity Disorder, Predominantly Inattentive Type.

If Criterion A2 is met but Criterion A1 is not met for the past 6 months:
_____ 314.01 Attention-Deficit/Hyperactivity Disorder, Predominantly Hyperactive-Impulsive Type.

For subsyndromal cases that do involve significant impairment:
_____ 314.9 Attention-Deficit/Hyperactivity Disorder, NOS.

### ADHD DSM-IV Coexisting Conditions

**INTERNALIZING DISORDERS**

**Generalized Anxiety Disorder**

- DSM-IV 300.02
- Excessive and persistent worries ≥6 months duration affecting multiple activities and events and manifest if 3 of 6:
  1. Restlessness, feeling keyed up, on edge
  2. Being easily fatigued
  3. Difficulty concentrating, mind going blank
  4. Irritability
  5. Muscle tension
  6. Sleep disturbance

**Major Depressive Disorder**

- DSM-IV 296.20–296.36
- ≥5 of 9 criteria almost every day for 2 weeks with at least depressed mood or loss of interest or pleasure:
  1. Depressed mood or irritable by subjective report or observation
  2. Markedly diminished interest or pleasure in all or almost all activities
  3. Weight loss/gain without dieting
  4. Insomnia or hypersomnia almost every day
  5. Psymotor agitation or retardation
  6. Fatigue or energy loss
  7. Feelings of worthlessness or excessive guilt
  8. Diminished ability to think or concentrate
  9. Recurrent thoughts of death or suicide

**Other Anxiety Disorders**

- DSM-IV 300.29
- Other isolated or specific phobia
- Separation anxiety disorder
- Anxiety state, unspecified

**Other Depression Disorders**

- DSM-IV 300.4
- Neurotic depression
- Brief depressive reaction
- Depressive disorder, NEC
- Bereavement, uncomplicated

**NICHQ ADHD Primary Care Initial Evaluation Form**

**Screening for Co-morbidities**

From Parent NICHQ Vanderbilt:

- **Oppositional-Defiant Disorder** is screened by 4 of 8 symptoms (scores of 2 or 3 are positive) (questions 19 through 26) AND a score of 4 or 5 on any of the 8 Performance Section items.
- **Conduct Disorder** is screened by 3 of 14 symptoms (scores of 2 or 3 are positive) (questions 27 through 40) AND a score of 4 or 5 on any of the 8 Performance Section items.
- **Anxiety/Depression** are screened by 3 of 7 symptoms (scores of 2 or 3 are positive) (questions 41 through 47) AND a score of 4 or 5 on any of the 8 Performance Section items.

From Teacher NICHQ Vanderbilt: Scores of 2 or 3 on a single item reflect *often-occurring* behaviors.

- **Oppositional-Defiant/Conduct Disorder** are screened by 3 of 10 items (scores of 2 or 3 are positive) (questions 19 through 28) AND a score of 4 or 5 on any of the 8 Performance Section items.
- **Anxiety/Depression** are screened by 3 of 7 items (scores of 2 or 3 are positive) (questions 29 through 35) AND a score of 4 or 5 on any of the 8 Performance Section items.

From Other Sources:

- Mental health problems
- Learning disabilities
- Other medical conditions

**Assessment**

- Does not meet criteria for ADHD.
- **Predominantly Inattentive subtype** requires 6 out of 9 symptoms (scores of 2 or 3 are positive) on items 1 through 9 AND a performance problem (scores of 4 or 5) in any of the items on the Performance Section for both the Parent and Teacher Assessment Scales.
- **Predominantly Hyperactive/Impulsive subtype** requires 6 out of 9 symptoms (scores of 2 or 3 are positive) on items 10 through 18 AND a performance problem (scores of 4 or 5) in any of the items on the Performance Section for both the Parent and Teacher Assessment Scales.
- **ADHD Combined Inattention/Hyperactivity** requires the above criteria on both Inattentive and Hyperactive/Impulsive subtypes.
- ADHD not otherwise specified.

**Plan**

- Patient provided with a written ADHD Management Plan

  Management

  Medication

  Titration follow-up plan

  Behavioral counseling

  School

  Other specialist referral

  Follow-up office visit scheduled for

  Goal for measurement at follow-up (specific criteria, eg, homework done, decrease school disciplinary notes)
**ADHD Management Plan—Sample 1**

These scales should NOT be used alone to make any diagnosis. You must take into consideration information from multiple sources. Scores of 2 or 3 on a single Symptom question reflect often-occurring behaviors. Scores of 4 or 5 on Performance questions reflect problems in performance.

The initial assessment scales, parent and teacher, have 2 components: symptom assessment and impairment in performance. On both the parent and teacher initial scales, the symptom assessment screens for symptoms that meet criteria for both inattentive (items 1–9) and hyperactive ADHD (items 10–18).

To meet DSM-IV criteria for the diagnosis, one must have at least 6 positive responses to either the inattentive 9 or hyperactive 9 core symptoms, or both. A positive response is a 2 or 3 (often, very often) (you could draw a line straight down the page and count the positive answers in each subsegment). There is a place to record the number of positives in each subsegment, and a place for total score for the first 18 symptoms (just add them up).

The initial scales also have symptom screens for 3 other co-morbidities—oppositional-defiant, conduct, and anxiety/depression. These are screened by the number of positive responses in each of the segments separated by the "squares." The specific item sets and numbers of positives required for each co-morbid symptom screen set are detailed below.

The second section of the scale has a set of performance measures, scored 1 to 5, with 4 and 5 being somewhat of a problem/problematic. To meet criteria for ADHD there must be at least one item of the Performance set in which the child scores a 4 or 5; ie, there must be impairment, not just symptoms to meet diagnostic criteria. The sheet has a place to record the number of positives (4s, 5s) and an Average Performance Score—add them up and divide by number of Performance criteria answered.

</tbody>
</table>

The parent and teacher follow-up scales have the first 18 core ADHD symptoms, not the co-morbid symptoms. The section segment has the same Performance items and impairment assessment as the initial scales, and then has a side-effect reporting scale that can be used to both assess and monitor the presence of adverse reactions to medications prescribed, if any.

Scoring the follow-up scales involves only calculating a total symptom score for items 1–18 that can be tracked over time, and the average of the Performance items answered as measures of improvement over time with treatment.

**Parent Assessment Follow-up**
- Calculate Total Symptom Score for questions 1–18.
- Calculate Average Performance Score for questions 19–26.

**Teacher Assessment Follow-up**
- Calculate Total Symptom Score for questions 1–18.
- Calculate Average Performance Score for questions 19–26.

The recommendations in this publication do not indicate an exclusive course of treatment or serve as a standard of medical care. Variations, taking into account individual circumstances, may be appropriate.

Adapted from the Pittsburgh side effects scale, developed by William E. Pelham, Jr, PhD.
Many parents worry about this question. The answer comes from children, families, teachers, and doctors working together as a team. Watching your child's behavior at home and in the community is very important to help answer this question. Your doctor will ask you to fill out rating scales about your child. Watching your child's behavior and talking with other adults in the child's life will be important for filling out the forms.

Here are a few tips about what you can do to help answer the question:

Watch your child closely during activities where he or she should pay attention.
- Doing homework
- Doing chores
- During storytelling or reading

Watch your child when you expect him or her to sit for a while or think before acting.
- Sitting through a family meal
- During a religious service
- Crossing the street
- Being frustrated
- With brothers or sisters
- While you are on the phone

Pay attention to how the environment affects your child's behavior. Make changes at home to improve your child's behavior.
- Ensure that your child understands what is expected. Speak slowly to your child. Have your child repeat the instructions.
- Turn off the TV or computer games during meals and homework. Also, close the curtains if it will help your child pay attention to what he or she needs to be doing.
- Provide structure to home life, such as regular mealtimes and bedtime. Write down the schedule and put it where the entire family can see it. Stick to the schedule.
- Provide your child with planned breaks during long assignments.
- Give rewards for paying attention and sitting, not just for getting things right and finishing. Some rewards might be: dessert for sitting through a meal, outdoor play for finishing homework, and praise for talking through problems.
- Try to find out what things set off problem behaviors. See if you can eliminate the triggers.

If your child spends time in 2 households, compare observations.
- Consult your child's other parent about behavior in that home. Cooperation between parents in this area really helps the child.
- If the child behaves differently, consider differences in the environment that may explain the difference in behavior. Differences are common and not a mark of good or bad parenting.

Talk to your child's teacher.
- Learn about your child's behavior at school. Talk about how your child does during academic lessons and also during play with other children.
- Compare your child's behavior in subjects he or she likes and those in which he or she has trouble with the work.
- Determine how the environment at school affects your child's behavior. When does your child perform well? What events trigger problem behaviors?
- Consider with the teacher whether your child's learning abilities should be evaluated at school. If he or she has poor grades in all subjects or in just a few subjects or requires extra time and effort to learn material, then a learning evaluation may be valuable.

Gather impressions from other adult caregivers who know your child well.
- Scout leaders or religious instructors who see your child during structured activities and during play with other children
- Relatives or neighbors who spend time with your child
- Determine how other environments affect your child's behavior. When does your child perform well? What events trigger problem behaviors?

Make an appointment to see your child's doctor.
- Let the receptionist know you are concerned that your child might have ADHD.
- If possible, arrange a visit when both parents can attend.

So you think your child may have ADHD, attention-deficit/hyperactivity disorder? Or your child’s teacher thinks your child may have ADHD? There are steps that need to be taken to make a diagnosis of ADHD. Some children may have a learning disability, some children may have difficulty with their hearing or vision, and some children may actually have ADHD. The answer comes from the parents, other family members, doctors, and other professionals working as a team. Here are the steps that the team needs to take to evaluate your child.

The steps in an evaluation are as follows:

Step 1: Parents make careful observations of the child’s behavior at home.

Step 2: Teacher(s) makes careful observations of the child at school.

Step 3: Parents and the child’s teacher(s) have a meeting about concerns.

Step 4: Parents make an appointment with the child’s doctor. Parents give the doctor the name and phone number of the teacher(s) and school.

Step 5: The doctor obtains a history, completes a physical examination (if not done recently), screens the child’s hearing and vision, and interviews the child.

Step 6: Parents are given a packet of information about ADHD, including parent and teacher behavior questionnaires, to be filled out before the next visit.

Step 7: The teacher(s) returns the questionnaire by mail or fax.

Step 8: At a second doctor visit, the doctor reviews the results of the parent and teacher questionnaires and determines if any other testing is required to make a diagnosis of ADHD or other condition.

Step 9: The doctor makes a diagnosis and reviews a plan for improvement with the parents.

Step 10: The child will need to revisit the doctor until the plan is in place and the child begins to show improvement, and then regularly for monitoring. Parents and teachers may be asked to provide behavior ratings at many times in this process.

Adapted from materials by Heidi Feldman, MD, PhD

ADHD Evaluation Timeline

Parents observe child’s behavior and have concerns about him or her.

Teacher observes child’s behavior and has concerns.

Regular follow-up to ensure that child is doing well.

Parent-teacher conference

Parents make appointment with child’s doctor.

Parents and child visit doctor frequently until plan works.

Parents and doctor (with teacher’s input) develop a plan.

Visit with doctor who obtains histories, ensures physical is up-to-date, interviews the child, and gives parents packet with forms.

Doctor reviews results and makes diagnosis.

Parents complete behavior rating scales.

Teacher completes behavior rating scales.
General Tips
1. Rules should be clear and brief. Your child should know exactly what you expect from him or her.
2. Give your child chores. This will give him or her a sense of responsibility and boost self-esteem.
3. Short lists of tasks are excellent to help a child remember.
4. Routines are extremely important for children with ADHD. Set up regular times for meals, homework, TV, getting up, and going to bed. Follow through on the schedule!
5. Identify what your child is good at doing (like art, math, computer skills) and build on it.
6. Tell your child that you love and support him or her unconditionally.
7. Catch your child being good and give immediate positive feedback.

Common Daily Problems
It is very hard to get my child ready for school in the morning.
- Create a consistent and predictable schedule for rising and getting ready in the morning.
- Set up a routine so that your child can predict the order of events. Put this routine in writing or in pictures on a poster for your child. Schedule example:
  - Alarm goes off ➔ Brush teeth ➔ Wash face ➔ Get dressed ➔ Eat breakfast ➔ Take medication ➔ Get on school bus
- Reward and praise your child! This will motivate your child to succeed. Even if your child does not succeed in all parts of the “morning routine,” use praise to reward your child when he or she is successful. Progress is often made in a series of small steps!
- If your child is on medication, try waking your child up 30 to 45 minutes before the usual wake time and give him or her the medication immediately. Then allow your child to “rest” in bed for the next 30 minutes. This rest period will allow the medication to begin working and your child will be better able to participate in the morning routine.

My child is very irritable in the late afternoon/early evening. (Common side effect of stimulant medications)
- The late afternoon and evening is often a very stressful time for all children in all families because parents and children have had to “hold it all together” at work and at school.
- If your child is on medication, your child may also be experiencing “rebound”—the time when your child’s medication is wearing off and ADHD symptoms may reappear.
- Adjust your child’s dosing schedule so that the medication is not wearing off during a time of “high demand” (for example, when homework or chores are usually being done).

My child is losing weight or not eating enough. (Common side effects of stimulant medication use)
- Encourage breakfast with calorie-dense foods.
- Give the morning dose of medication after your child has already eaten breakfast. Afternoon doses should also be given after lunch.
- Provide your child with nutritious after-school and bedtime snacks that are high in protein and in complex carbohydrates. Examples: Nutrition/protein bars, shakes/drinks made with protein powder, liquid meals.
- Get eating started with any highly preferred food before giving other foods.
- Consider shifting dinner to a time later in the evening when your child’s medication has worn off. Alternatively, allow your child to “graze” in the evening on healthy snacks, as he or she may be hungriest right before bed.
- Follow your child’s height and weight with careful measurements at your child’s doctor’s office and talk to your child’s doctor.

Homework Tips
- Establish a routine and schedule for homework (a specific time and place.) Don’t allow your child to wait until the evening to get started.
- Limit distractions in the home during homework hours (reducing unnecessary noise, activity, and phone calls, and turning off the TV).
- Praise and compliment your child when he or she puts forth good effort and completes tasks. In a supportive, noncritical manner, it is appropriate and helpful to assist in pointing out and making some corrections of errors on the homework.
- It is not your responsibility to correct all of your child’s errors on homework or make him or her complete and turn in a perfect paper.
- Remind your child to do homework and offer incentives: “When you finish your homework, you can watch TV or play a game.”
- If your child struggles with reading, help by reading the material together or reading it to your son or daughter.
- Work a certain amount of time and then stop working on homework.

Dedicated to the Health of All Children®
Many parents find it very difficult to help their own child with schoolwork. Find someone who can. Consider hiring a tutor! Often a junior or senior high school student is ideal, depending on the need and age of your child.

**Discipline**
- Be firm. Set rules and keep to them.
- Make sure your child understands the rules, so he or she does not feel uninformed.
- Use positive reinforcement. Praise and reward your child for good behavior.
- Change or rotate rewards frequently to maintain a high interest level.
- Punish behavior, not the child. If your child misbehaves, try alternatives like allowing natural consequences, withdrawing yourself from the conflict, or giving your child a choice.

**Taking Care of Yourself**
- Come to terms with your child’s challenges and strengths.
- Seek support from family and friends or professional help such as counseling or support groups.
- Help other family members recognize and understand ADHD.

"Common Daily Problems" adapted from material developed by Laurel K. Leslie, MD, San Diego ADHD Project.
How to Establish a School-Home Daily Report Card

1. Select the Areas for Improvement.
   - Discuss the child’s behavior with all school staff who work with the child.
   - Determine the child’s greatest areas of impairment.
   - Define goals toward which the child should be working regarding the areas of impairment.
   - Key domains:
     - Improving peer relations
     - Improving academic work
     - Improving classroom rule-following and relationships with adults

   - Identify specific behaviors (“target behaviors”) that can be changed to make progress toward the goals easier.
   - Target behaviors must be meaningful and clearly defined/observed/counted by teacher and child.
   - Examples of target behaviors in the key domains:
     - Improving peer relations: does not interrupt other children during their work time, does not tease other children, plays without fighting at recess
     - Improving academic work: has materials and assignments necessary to do tasks, completes assigned academic tasks, is accurate on assigned tasks, completes and returns homework
     - Improving classroom rule-following and relationships with adults: obeys the teacher when commands are given, does not talk back to the teacher, follows classroom rules
   - Additional target behaviors are listed on the attached sheet, Sample Report Card Targets.

   - Estimate how often the child is doing the target behaviors by reviewing school records and/or observation.
   - Determine which behaviors need to be included on the report.
   - Evaluate target behaviors several times throughout the day.
   - Set a reasonable criterion for each target behavior (a criterion is a target level the child will have to meet to receive a positive mark for that behavior). Set criteria to be met for each part of the day, not the overall day (e.g., “interrupts fewer than 2 times in each class period” rather than “interrupts fewer than 12 times per day”).
   - Additional target behaviors are listed on the attached sheet, Sample Report Card Targets.

   - Meet with teacher, parents, and child.
   - Explain all aspects of the Daily Report Card (DRC) to the child in a positive manner.

5. Establish a Home-based Reward System.
   - Rewards must be selected by the child.
   - Arrange awards so that:
     - Fewer or less preferred rewards can be earned for fewer yeses.
     - More desired rewards can be earned for better performance.
   - Give the child a menu of rewards (see Sample Home and School Rewards):
     - Select rewards for each level.
     - Label the different levels with child-appropriate names (e.g., One-Star Day, Two-Star Day).
     - Use the Weekly Daily Report Card Chart to track weekly performance.
     - Some children need more immediate rewards than the end-of-day home rewards—in such cases, in-school rewards can be used.

6. Monitor and Modify the Programs.
   - Record daily the number of yeses the child received on each target.
   - Once the child has regularly begun to meet the criterion, make the criteria harder (if the child is regularly failing to meet the criterion, make the criteria easier).
   - Once the criterion for a target is at an acceptable level and the child is consistently reaching it, drop that target behavior from the DRC. (Let the child know why it was dropped and replace with another target if necessary.)
   - Move to a weekly report/reward system if the child is doing so well that daily reports are no longer necessary.
   - The report card can be stopped when the child is functioning within an appropriate range within the classroom, and reinstated if problems begin to occur again.

   - If the system is not working to change the child’s behavior, examine the program and change where appropriate (see Troubleshooting a Daily Report Card).

8. Consider Other Treatments.
   - If, after troubleshooting and modification, the DRC is not resulting in maximal improvement, consider additional behavioral components (e.g., more frequent praise, time-out) and/or more powerful or intensive behavioral procedures (e.g., a point system).

## Troubleshooting a Daily Report Card

<table>
<thead>
<tr>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Is the child taking the Daily Report Card (DRC) home?</td>
<td>Ensure that the child has a backpack or special folder in which to carry DRC.</td>
</tr>
<tr>
<td></td>
<td>Have the teacher for last class of the day prompt the child to take DRC home.</td>
</tr>
<tr>
<td></td>
<td>Assume the child received a negative report if he or she does not have DRC.</td>
</tr>
<tr>
<td></td>
<td>Implement positive consequences for bringing home DRC.</td>
</tr>
<tr>
<td>Are the target behaviors appropriate?</td>
<td>Redefine the target behaviors for the child.</td>
</tr>
<tr>
<td>Are the target behaviors clearly defined for the child?</td>
<td>Modify the target behaviors.</td>
</tr>
<tr>
<td>Are the target behaviors socially valid?</td>
<td>Modify the target behaviors or class context (eg, “gets along with peers” should not be a target if the class structure does not provide the opportunity for peer interactions).</td>
</tr>
<tr>
<td>Can the target behaviors be reasonably attained in the classroom context?</td>
<td></td>
</tr>
<tr>
<td>Does the child remember the target behaviors throughout the day?</td>
<td>Implement a system of visual prompts (eg, put task sheet on desk).</td>
</tr>
<tr>
<td>Are the criteria for success realistic (eg, not too high or too low relative to baseline)?</td>
<td>Modify the criteria to shape the behavior.</td>
</tr>
<tr>
<td>Is something interfering with the child’s reaching the criteria (eg, child does not complete assignments due to messy, disorganized desk)?</td>
<td>Work on removing the impediment (eg, work on improving organizational skills, modify class schedule or structure).</td>
</tr>
<tr>
<td>Does the child understand the system?</td>
<td>Implement a system of visual prompts, if necessary.</td>
</tr>
<tr>
<td>Can the child accurately describe the target behaviors and criteria for positive evaluations?</td>
<td>Review system with child until child can accurately describe system. Increase frequency of reviewing if child continues to have difficulty. Explain the DRC system to the child again. Simplify the DRC system if necessary.</td>
</tr>
<tr>
<td>Can the child accurately describe the relationship between the criteria and the rewards?</td>
<td></td>
</tr>
<tr>
<td>Is the monitoring system working properly?</td>
<td>Modify the definitions of the target behaviors.</td>
</tr>
<tr>
<td>Have the target behaviors been sufficiently clearly defined that the teacher can monitor and evaluate them?</td>
<td>Provide visual or auditory prompts for recording.</td>
</tr>
<tr>
<td>Is the monitoring and recording process efficient enough so that the teacher is doing it accurately and consistently?</td>
<td>Simplify the monitoring or recording process.</td>
</tr>
<tr>
<td>Can the child accurately monitor his or her progress throughout the day?</td>
<td>Design and implement a monitoring system that includes a recording form for the child (may include visual or auditory prompts).</td>
</tr>
<tr>
<td>Is the child receiving sufficient feedback so that he or she knows where he or she stands regarding the criteria?</td>
<td>Modify the teacher’s procedures for providing feedback to the child (eg, provide visual prompts; increase immediacy, frequency, or contingent nature of feedback).</td>
</tr>
<tr>
<td>Is the home-based reward system working properly?</td>
<td>Change the home-based rewards (eg, increase the number of choices on menu, change the hierarchy of rewards).</td>
</tr>
<tr>
<td>Are the home-based rewards motivating for the child?</td>
<td>Review reward procedures with parents again and ensure that reward is provided only when the child has earned it.</td>
</tr>
<tr>
<td>Has it been ensured the child does not receive the reward noncontingently?</td>
<td>Modify the procedures for delivering the home-based rewards (eg, visual prompts) or the nature of the home-based rewards.</td>
</tr>
<tr>
<td>Are the parents delivering the rewards reliably?</td>
<td>Design and implement procedures for providing school-based rewards.</td>
</tr>
<tr>
<td>Can the child delay gratification long enough for home-based rewards to be effective?</td>
<td></td>
</tr>

Sample Report Card Targets

**Academic Productivity**
Completes X assignments within the specified time
Completes X assignments with X% accuracy
Starts work with X or fewer reminders
Leaves appropriate spaces between words X% of the time or assignment
Writes legibly/uses 1-line cross outs instead of scribbles/writes on the lines of the paper
Corrects assignments appropriately*
Turns in assignments appropriately*

**Following Classroom Rules**
Follows class/school rules with X or fewer violations
Interrupts class less than X times per period/Works quietly with X or fewer reminders/Makes X or fewer inappropriate noises
Follows directions with X or fewer repetitions
Stays on task with X or fewer reminders
Sits appropriately* in assigned area with X or fewer reminders
Raises hand to speak with X or fewer reminders
Uses materials or possessions appropriately*
Has XX or fewer instances of stealing
Has XX or fewer instances of cursing
Has XX or fewer instances of complaining/crying/whining
Has XX or fewer instances of lying
Has XX or fewer instances of destroying property

**Peer Relationships**
Shares/helps peers when appropriate with X or fewer reminders
Ignores negative behavior of others/Child shows no observable response to negative behavior of others
Teases peers X or fewer times per period
Fewer than X fights with peers
Speaks clearly (fewer than X prompts for mumbling)
Contributes to discussion (answers X questions orally)
Contributes to discussion (at least X unprompted, relevant, nonredundant contributions)
Fewer than X negative self comments
Minds own business with XX or fewer reminders
Needs XX or fewer reminders to stop bossing peers
Does not bother other children during seat work (fewer than X complaints from others)

**Teacher Relationships**
Accepts feedback appropriately* (no more than X arguments/ X% of arguments) following feedback

Appropriately* asks an adult for help when needed
Maintains appropriate* eye contact when talking to an adult with X/fewer than X prompts to maintain eye contact
Respects adults (talks back fewer than X times per period)
Complies with X% of teacher commands/requests/Fewer than X noncompliances per period

**Behavior Outside the Classroom**
Follows rules at lunch/recess/free time/gym/specials/assemblies/bathroom/in hallway with X or fewer rule violations
Walks in line appropriately*/Follows transition rules with X or fewer violations
Follows rules of the bus with X or fewer violations
Needs XX or fewer warnings for exhibiting bad table manners (eg, playing with food, chewing with mouth open, throwing trash on the floor)
Changes into gym clothes/school clothes within X:XX minutes

**Time-out Behavior**
Serves time-outs appropriately*
Child serves a time-out without engaging in inappropriate behaviors
While serving a time-out, the child exhibits no more than X instances of negative behavior

**Responsibility for Belongings**
Brings DRC to teacher for feedback before leaving for the next class/activity
Responsible for own belongings (has belongings at appropriate* times according to the checklist/chart**)
Has materials necessary for class/subject area
Organizes materials and possessions according to checklist/chart**
Morning routine completed according to checklist/chart**
End of day routine completed appropriately according to checklist/chart**
Brings supplies to class with XX or fewer reminders/brings supplies to class according to checklist/chart**
Hangs up jacket/backpack with XX or fewer reminders
Takes lunchtime pill with X or fewer reminders
Has only materials needed for the assignment on desk

**Homework**
Brings completed homework to class
Writes homework in assignment book with X or fewer reminders
DRC is returned signed the next day by parent
Has all needed materials for homework in backpack at the end of the day

**“Appropriately” must always be defined by teacher for child.**
**“Checklist/chart must accompany target behavior and be displayed for child.”**

The recommendations in this publication do not indicate an exclusive course of treatment or serve as a standard of medical care. Variations, taking into account individual circumstances, may be appropriate.

American Academy of Pediatrics

National Initiative for Children's Healthcare Quality
Sample Home Rewards

**Daily Rewards**
- Snacks
- Dessert after dinner
- Staying up X minutes beyond bedtime
- Having a bedtime story/Reading with a parent for X minutes
- Choosing a radio station in car
- Extra bathtub time for X minutes
- Educational games on computer for X minutes
- Choosing family TV show
- Talking on phone to friend (local call)
- Video game time for X minutes
- Playing outside for X minutes
- Television time for X minutes
- Listening to radio/stereo for X minutes
- Other as suggested by child

**Daily or Weekly Rewards**
- Going over to a friend’s house to play
- Having a friend come over to play
- Allowance
- Bike riding/skating/scootering/skateboarding (in neighborhood for daily reward; longer trip with family or at bike trail/skate park for weekly reward)
- Special activity with mom or dad
- Special time with mom or dad for X minutes
- Earn day off from chores
- Game of choice with parent/family
- Other as suggested by child

**Weekly Rewards**
- Making a long-distance call to relatives or friends
- Going to the video arcade at the mall
- Going fishing
- Going shopping-going to the mall
- Going to the movies
- Going to the park
- Getting ice cream
- Bowling, miniature golf/Selecting something special at the store
- Making popcorn
- Having friend over to spend night
- Going to friend’s to spend night
- Choosing family movie
- Renting movie video
- Going to a fast-food restaurant with parent and/or family
- Watching taped TV shows
- Free time for X minutes
- Other as suggested by child

**Notes:** Older children could save over weeks to get a monthly (or longer) reward as long as visuals (e.g., pieces of picture of activity) are used; e.g., camping trip with parent, trip to baseball game, purchase of a video game. Rewards for an individual child need to be established as a menu. Children may make multiple choices from the menu for higher levels of reward, or may choose a longer period of time for a given reward.

Sample School Rewards*

- Talk to best friend
- Listen to tape player (with headphones)
- Read a book
- Help clean up classroom
- Clean the erasers
- Wash the chalkboard
- Be teacher’s helper
- Eat lunch outside on a nice day
- Extra time at recess
- Write on chalkboard
- Use magic markers
- Draw a picture
- Choose book to read to the class
- Read to a friend
- Read with a friend
- Care for class animals
- Play “teacher”
- See a movie/filmstrip
- Decorate bulletin board
- Be messenger for office
- Grade papers
- Have treats
- Earn class party
- Class field trip
- Student of the Day/Month
- Pop popcorn
- Be a line leader
- Visit the janitor
- Use the computer
- Make ice cream sundaes
- Teach a classmate
- Choose stickers
- Take a good note home
- Receive a positive phone call
- Give lots of praise
- Hide a special note in desk
- Choose seat for specific time
- Play card games
- Receive award certificate
- Take Polaroid pictures
- Draw from “grab bag”
- Eat at a special table
- Visit the principal

*Sample School Rewards can be added to the home-based reward system especially if a child is not responding appropriately to the Home Rewards. Teachers need to make sure that a child wants and will work for one of these School Rewards.

Used with permission of William E. Pelham, Jr, @CTADD. Available for downloading at no cost in expanded format at http://summertreatmentprogram.com
Educational Rights for Children With ADHD

There are 2 main laws protecting students with disabilities—including those with ADHD: 1) the Individuals with Disabilities Education Act of 1997 (IDEA) and 2) Section 504 of the Rehabilitation Act of 1973. IDEA is special education law. Section 504 is a civil rights statute. Both laws guarantee to qualified students a free and appropriate public education (FAPE) and instruction in the least restrictive environment (LRE), which means with their peers who are not disabled and to the maximum extent appropriate to their needs.

Because there are different criteria for eligibility, services/supports available, and procedures and safeguards for implementing the laws, it is important for parents, educators, clinicians, and advocates to be well aware of the variations between IDEA and Section 504 and fully informed about the respective advantages and disadvantages.

SST
Student Study Team
Who Is Eligible?

IDEA strongly emphasizes the provision of special education and related services that enable students to access and progress in the general education program. Sometimes students with ADHD qualify for special education and related services under the disability categories of "specific learning disability" (SLD) or "emotional disturbance" (ED). For example, a child who has ADHD who also has coexisting learning disabilities may be eligible under the SLD category. Students with ADHD most commonly are eligible for special education and related services under the IDEA category of "other health impaired" (OHI). Eligibility criteria under this category require that the child has a chronic or acute health problem (eg, ADHD) causing limited alertness to the educational environment (due to heightened alertness to environmental stimuli) that results in an adverse effect on the child's educational performance to the degree that special education is needed.

Note: The adverse effect on educational performance is not limited to academics, but can include impairments in other aspects of school functioning, such as behavior, as well.

How Does a Parent Access Services Under IDEA?

- Parents or school personnel may refer a child by requesting an evaluation to determine eligibility for special education and related services. It is best to put this request in writing.
- Within a limited time frame, the school's multidisciplinary evaluation team, addressing all areas of the child's difficulties, develops an assessment plan.
- After parents or guardians consent to the assessment plan, the child receives a comprehensive evaluation by the multidisciplinary team of school professionals.
- After the evaluation, an Individualized Education Program (IEP) meeting is scheduled with the team, including parents, teacher(s), special education providers, the school psychologist and/or educational evaluator, a school system representative, and the student (as appropriate).

IDEA

- Based on the results of the evaluation, as well as other input provided by parents and/or other team members, the team decides whether the child meets eligibility criteria for special education under one of the categories defined by IDEA.
- An IEP is developed and written for qualifying students through a collaborative team effort. It is tailored and designed to address the educational needs of the student.
- The IEP goes into effect once the parents sign it and agree to the plan.
- The IEP must address the following:
  - Present levels of educational performance, including how the child's disability affects his or her involvement and progress in the general curriculum
  - Delineation of all special education and related services, modifications (if any), and supports to be provided to the child or on behalf of the child
  - Annual goals and measurable, short-term objectives/benchmarks
  - The extent (if any) to which the child will not participate with children in the regular class and other school activities
  - Modifications (if any) in the administration of statewide and district-wide tests the child will need to participate in those assessments
  - Dates and places specifying when, where, and how often services will be provided, and by whom

What Happens After the IEP Is Written?

1. Services are provided. These include all programs, supplemental aids, program modifications, and accommodations that are spelled out in the IEP.
2. Progress is measured and reported to parents. Parents are informed of progress toward IEP goals during the year, and an annual IEP review meeting is required.
3. Students are reevaluated every 3 years (triennial evaluation) or sooner if deemed necessary by the team or on parent/teacher request.

Educational Rights for Children With ADHD

Section 504

Who Is Eligible?
Students with ADHD also may be protected under Section 504 of the Rehabilitation Act of 1973 (even if they do not meet eligibility criteria under IDEA for special education). To determine eligibility under Section 504 (ie, the impact of the disability on learning), the school is required to do an assessment. This typically is a much less extensive evaluation than that conducted for the IEP process.

Section 504 is a federal civil rights statute that:
- Protects the rights of people with disabilities from discrimination by any agencies receiving federal funding (including all public schools)
- Applies to students with a record of (or who are regarded as having) a physical or mental impairment that substantially limits one or more major life function (which includes learning)
- Is intended to provide students with disabilities equal access to education and commensurate opportunities to learn as their peers who are not disabled

How Does a Parent Access Services Under Section 504?
- Parents or school personnel may refer a child by requesting an evaluation to determine eligibility for special education and related services. It is best to put this request in writing.
- If the school determines that the child’s ADHD does significantly limit his or her learning, the child would be eligible for a 504 plan designating:
  - Reasonable accommodations in the educational program
  - Related aids and services, if deemed necessary (eg, counseling, assistive technology)

What Happens After the 504 Plan Is Written?
The implementation of a 504 plan typically falls under the responsibility of general education, not special education. A few sample classroom accommodations may include:
- Tailoring homework assignments
- Extended time for testing
- Preferential seating
- Supplementing verbal instructions with visual instructions
- Organizational assistance
- Using behavioral management techniques
- Modifying test delivery

What Do Section 504 and IDEA Have in Common?
Both:
- Require school districts to provide free and appropriate public education (FAPE) in the least restrictive environment (LRE)
- Provide a variety of supports (adaptations/accommodations/modifications) to enable the student to participate and learn in the general education program
- Provide an opportunity for the student to participate in extracurricular and nonacademic activities
- Require nondiscriminatory evaluation by the school district
- Include due process procedures if a family is dissatisfied with a school’s decision

Which One Is Right for My Child—a 504 Plan or an IEP?
This is a decision that the team (parents and school personnel) must make considering eligibility criteria and the specific needs of the individual student. For students with ADHD who have more significant school difficulties:
IDEA usually is preferable because:
- It provides for a more extensive evaluation.
- Specific goals and short-term objectives are a key component of the plan and regularly monitored for progress.
- There is a much wider range of program options, services, and supports available.
- It provides funding for programs/services (Section 504 is non-funded).
- It provides more protections (procedural safeguards, monitoring, regulations) with regard to evaluation, frequency of review, parent participation, disciplinary actions, and other factors.

A 504 plan would be preferable for:
- Students who have milder impairments and don’t need special education. A 504 plan is a faster, easier procedure for obtaining accommodations and supports.
- Students whose educational needs can be addressed through adjustments, modifications, and accommodations in the general curriculum/classroom.

Address

RE: (Student’s Name and Grade)

Dear (Principal’s Name)*:

I am the parent of (Student’s Name), who is in Mr/Ms (Teacher’s Name)’s class. (Student’s Name) has been experiencing school problems for some time now. We have been working with the teacher(s) to modify (his/her) regular education program but (we have not seen any improvement or the problems have been getting worse). Therefore, I wish to request an assessment of my child for appropriate educational services and interventions according to the provisions of Section 504 of the Rehabilitation Act.

I look forward to working with you as soon as possible to develop an assessment plan to begin the evaluation process. I request copies of the assessment results 1 week prior to the meeting.

Thank you for your assistance. I can be reached by phone at (Area Code and Phone Number).
The best time to reach me is (times/days).

Sincerely,

(Sign Your Name)
(Print Your Name)
(Address)
(Telephone Number)

Note: Remember to keep a copy for your files.
*If the principal does not respond, contact the district 504 coordinator. It is recommended that you either write a letter or document your phone conversation. If you do not get a response, you have the right to file a compliance complaint.

Working With Your Child’s School

Why Is My Child Having Trouble in School?
The process differs in various school districts and even among different schools in the same district. Some of the names this process may go by include Student Study Team (SST), Instructional Support Team (IST), Pupil Assistance Team (PAT), Student Intervention Team (SIT), or Teacher Assistance Team (TAT).

Parents are encouraged to request a meeting on their child to discuss concerns and create a plan of action to address their child’s needs. In addition to the child’s teacher, members of the team may include the child, the parents, a mentor teacher or other teachers, the principal, the school nurse, the resource specialist, a speech and language specialist, or a counselor or psychologist. The team members meet to discuss the child’s strengths and weaknesses, the child’s progress in his or her current placement, and the kinds of problems the child is having. The team members “brainstorm” to develop a plan of action that documents the kinds of interventions that will help the child, the timeline for the changes to take place, and the school staff responsible for the implementation of the team’s recommendations.

The team should also come up with a plan to monitor the child’s progress. A follow-up meeting should be scheduled within a reasonable time frame (usually 4 to 6 weeks) to determine whether the team’s interventions are actually helping the child in the areas of difficulty.

Typical School Performance Difficulties Associated With ADHD

- Poor organization and study skills
- Weaknesses in written language/writing skills
- Minimal/inconsistent production and output (both in-class assignments and homework)
- Behavior that interferes with learning and impacts on interpersonal relationships
- Immature social skills

What Can I Personally Do to Help?
There are many different ways that a parent’s participation can make a difference in a child’s school experience, including:

- Spending time in the classroom, if your work schedule allows, and observing your child’s behavior.
- Talking with your child’s teacher to identify where your child is having the most problems.
- Working with your child’s teacher to make a plan for how you will address these problems and what strategies at school and home will help your child be successful at learning and completing work.
- Acknowledging the extra efforts your child’s teacher may have to make to help your child.

- Reading all you can about ADHD and sharing it with your child’s teacher and other school officials.
- Becoming an expert on ADHD and your child.
- Finding out about tutoring options through your child’s school or local community groups. Children with ADHD may take longer to learn material compared with other children even though they are just as smart. Tutoring may help your child master new materials.
- Making sure your child actually has mastered new material presented so that he or she does not get behind academically.
- Acknowledging how much harder it is for your child to get organized, stay on task, complete assignments, and learn material compared with other children. Help your child to get organized, break tasks down into smaller pieces, and expend his or her excess physical energy in ways that are “okay” at home and in the classroom.
- Praising your child and rewarding him or her for a job well done immediately after completing tasks or homework.

Another good way to get help from your school is to determine if your school has a regular education process that helps teachers with students who are having learning or behavioral problems that the teacher has been unsuccessful in solving. The process differs in various school districts and even among different schools in the same district. Some of the names this process may go by include Student Study Team (SST), Instructional Support Team (IST), Pupil Assistance Team (PAT), Student Intervention Team (SIT), or Teacher Assistance Team (TAT).

Parents are encouraged to request a meeting on their child to discuss concerns and create a plan of action to address their child’s needs. In addition to the child’s teacher, members of the team may include the child, the parents, a mentor teacher or other teachers, the principal, the school nurse, the resource specialist, a speech and language specialist, or a counselor or psychologist. The team members meet to discuss the child’s strengths and weaknesses, the child’s progress in his or her current placement, and the kinds of problems the child is having. The team members “brainstorm” to develop a plan of action that documents the kinds of interventions that will help the child, the timeline for the changes to take place, and the school staff responsible for the implementation of the team’s recommendations.

The team should also come up with a plan to monitor the child’s progress. A follow-up meeting should be scheduled within a reasonable time frame (usually 4 to 6 weeks) to determine whether the team’s interventions are actually helping the child in the areas of difficulty.

Dear Teacher:

The parents of one of your students are seeking to have their child evaluated by our office for a health concern. As part of our evaluation process, we ask that both the child’s parents and teacher complete a set of behavioral rating scales. This information is important for the diagnosis and treatment of your student.

Your time and cooperation in this matter is greatly appreciated. Attached please find a Release of Information Form that the parents have completed and a set of teacher rating scales and questionnaires. These forms include:

1. NICHQ Vanderbilt Teacher Assessment Scale
2. ________________________________
3. ________________________________
4. ________________________________

Generally, the teacher who spends the most time with the child should complete the teacher rating scales. However, if the child has more than one primary teacher, or has a special education teacher, it would be useful for us to obtain a separate set of rating scales from each teacher. If more than one set of rating scales is required, please have the parent contact us directly at _____________ and we will forward additional rating scales as needed. Please note that the same teacher should complete each entire set of forms.

Please fill out the forms as completely as possible. If you do not know the answer to a question, please write, “Don't know,” so that we can be sure the item was not simply overlooked. Some of the questions in the rating scales may seem redundant. This is necessary to ensure that we obtain accurate diagnostic information.

We ask that you complete these forms as soon as possible, as we are unable to begin a child’s evaluation without the teacher rating scales. The forms should be mailed to us directly in the envelope provided.

Thank you for your assistance and cooperation in the completion of these forms. If you have any questions regarding the enclosed materials, or if you would like additional information regarding services provided, please do not hesitate to contact us.

Sincerely,

John Doe, M D

Homework Tips for Parents

- Establish a routine and schedule for homework (a specific time and place) and adhere to the schedule as closely as possible. Don't allow your child to wait until the evening to get started.
- Limit distractions in the home during homework hours (e.g., reduce unnecessary noise, activity, and phone calls; turn off the TV).
- Assist your child in dividing assignments into smaller parts or segments that are more manageable and less overwhelming.
- Assist your child in getting started on assignments (e.g., read the directions together, do the first items together, observe as your child does the next problem/item on his or her own). Then get up and leave.
- Monitor and give feedback without doing all the work together. You want your child to attempt as much as possible independently.
- Praise and compliment your child when he or she puts forth good effort and completes tasks. In a supportive, noncritical manner it is appropriate and helpful to assist in pointing out and making some corrections of errors on the homework.
- It is not your responsibility to correct all of your child's errors on homework or make him or her complete and turn in a perfect paper.
- Remind your child to do homework and offer incentives: “When you finish your homework, you can...”
- A contract for a larger incentive/reinforcer may be worked out as part of a plan to motivate your child to persist and follow through with homework. (“If you have no missing or late homework assignments this next week, you will earn...”).
- Let the teacher know your child's frustration and tolerance level in the evening. The teacher needs to be aware of the amount of time it takes your child to complete tasks and what efforts you are making to help at home.
- Help your child study for tests. Study together. Quiz your child in a variety of formats.
- If your child struggles with reading, help by reading the material together or reading it to your son or daughter.
- Work a certain amount of time and then stop working on homework. Don't force your child to spend an excessive and inappropriate amount of time on homework. If you feel your child worked enough for one night, write a note to the teacher attached to the homework.
- It is very common for students with ADHD to fail to turn in their finished work. It is very frustrating to know your child struggled to do the work, but then never gets credit for having done it. Papers seem to mysteriously vanish off the face of the earth! Supervise to make sure that completed work leaves the home and is in the notebook/backpack. You may want to arrange with the teacher a system for collecting the work immediately on arrival at school.
- Many parents find it very difficult to help their own child with schoolwork. Find someone who can. Consider hiring a tutor! Often a junior or senior high school student is ideal, depending on the needs and age of your child.
- Make sure your child has the phone number of a study buddy—at least one responsible classmate to call for clarification of homework assignments.
- Parents, the biggest struggle is keeping on top of those dreaded long-range homework assignments (e.g., reports, projects). This is something you will need to be vigilant about. Ask for a copy of the project requirements. Post the list at home and go over it together with your child. Write the due date on a master calendar. Then plan how to break down the project into manageable parts, scheduling steps along the way. Get started AT ONCE with going to the library, gathering resources, beginning the reading, and so forth.

The information contained in this publication should not be used as a substitute for the medical care and advice of your pediatrician. There may be variations in treatment that your pediatrician may recommend based on individual facts and circumstances.
Many children with ADHD have difficulty sleeping at night, whether or not they are on medication. This is partially related to the ADHD; parents often describe their children as being "on the go" and collapsing late at night. It may also be due to the fact that stimulant medication has worn off, making it more difficult for them to manage their behavior. Lastly, some children have difficulty falling asleep because the stimulants affect them the same way caffeine affects adults.

Here are a few tips:

■ **Develop bedtime rituals/routines.**
  - A bedtime ritual is a powerful sign that it is time to sleep. It needs to be simple so the child can "re-create" the ritual even if the parent is not present.
  - Try writing out the bedtime ritual to make it consistent.

■ **Pay attention to the sleep environment.**
  - Background noises, location, sleep partners, bedding, favorite toys, and lighting can all affect a child's ability to fall asleep.
  - A cool, dark, quiet room is best.

■ **Letting children cry themselves to sleep is not recommended.**
  - Teach them to soothe themselves, such as giving the child a special blanket, a picture of the parent(s), or a stuffed animal to hold while falling asleep.
  - Avoid activities that depend on a parent's presence, including rocking or holding the child until he or she falls asleep.

■ **Make the bedroom a sleep-only zone.**
  - Remove most toys, games, televisions, computers, and radios from your child's bedroom if your child is having trouble falling asleep or is often up at night.
  - One or two stuffed animals are acceptable.

■ **Limit time in bed.**
  - Hours spent awake in bed interfere with good sleep patterns; the goal is to make the child's bed a place for sleeping only.
  - Be aware of how much sleep children need at different ages. Even though adults need about 8 hours of sleep, infants and toddlers often sleep more than 12 hours and children usually sleep 10 hours. Teenagers also need lots of sleep, sometimes requiring 9 hours or more.

■ **Establish consistent waking times.**
  - Bedtimes and waking times should be the same 7 days a week.
  - It is easier to enforce a waking time than a bedtime.

■ **Avoid drinks with caffeine.**
  - Caffeine is present in a wide range of beverages, such as tea, soda, cocoa, and coffee. Drinking these beverages past the afternoon may make it more difficult for your child to settle down to sleep.

■ **Establish daytime routines.**
  - Regular mealtimes and activity times, including playtime with parents, also help set sleep times.

■ **Chart your child's progress.**
  - Praise your child for successful quiet nights.
  - Consider marking successful nights on a star chart and providing rewards at the end of the week.

■ **Waking up at night is a habit.**
  - Social contact with parents, feeding, and availability of interesting toys encourage the child to be up late, so set limits on attention-getting behaviors at night.

■ **Consider medical problems.**
  - Allergy, asthma, or conditions that cause pain can disrupt sleep. If your child snores loudly and/or pauses in breathing, talk to your doctor.

■ **Try medications to help your child sleep only under the care of your child's doctor.**
  - Medications need to be used very carefully in young children. Many medications can have complications and make sleep worse.
  - Some children with ADHD may actually be helped by a small dose of a stimulant medication at bedtime. Paradoxically, this dose may help a child to get organized for sleep.
  - Some children may ultimately need other bedtime medications— at least for a little while— to help improve sleep. Talk with your doctor before starting any over-the-counter or prescription medications.
